Working Prototype Known Problems Report

Team: Zoomers

1. Known Issues

- a. When the project is running, the terminal it is running on will sometimes throw a socket error as you are navigating through the pages. This does not appear to affect the user experience.
- b. The email generation feature had an issue where it could not generate if a user had already entered text into the output text area box, this should be fixed now but it is being noted.
- c. When voting on issues, a method for the user to see their votes has not been implemented due to time constraints. This may be confusing when the user votes.
- d. Read me buttons do not toggle
- e. Logo at the bottom of the site does not lead to homepage
- f. Typo in petitions section
- g. Spacing typo in generation of climate change emails
- h. Scroll to top button does not toggle back to white after being clicked
- i. Page formatting will not be consistent if zooming in or out

2. Acceptance Criteria

- a. We would typically implement the feature we wanted on the website and ask two other members to verify the functionality before marking it as done.
